

Putsch® Root Washers

Big performance for automated batch processing

Inspired by Putsch®'s family of quality products, our high-performance root washer was engineered to specifically meet the automated batch processing needs for horseradish, ginger and other root processing lines. Our washers are custom built and are easily adaptable to existing configurations or can be included in a complete washing design provided by Putsch®'s consultants.

Advantages include:

- Automated, programmable operation for different batch sizes and applications
- High safety standards
- Extremely low water consumption
- Easy and efficient loading and unloading
- Excellent washing results
- Short cycle times
- Loading and unloading equipment available

Excellence in Technology through:

- Expertise,
- Service,
- Reliability
- and Experience

Putsch® Horseradish Root Washer

Effectively removes gravel, dirt, and rocks

- The state of the art Putsch® Root Washer 4400 x 2900 is a semi-automatic machine designed to load, wash and discharge horseradish roots and/or any other kind of root vegetable.
- Our root washers are custom built and can be adjusted to suit your specific configuration and unique needs.
